PORTFOLIO SLIDE DECK

Ethan Worth
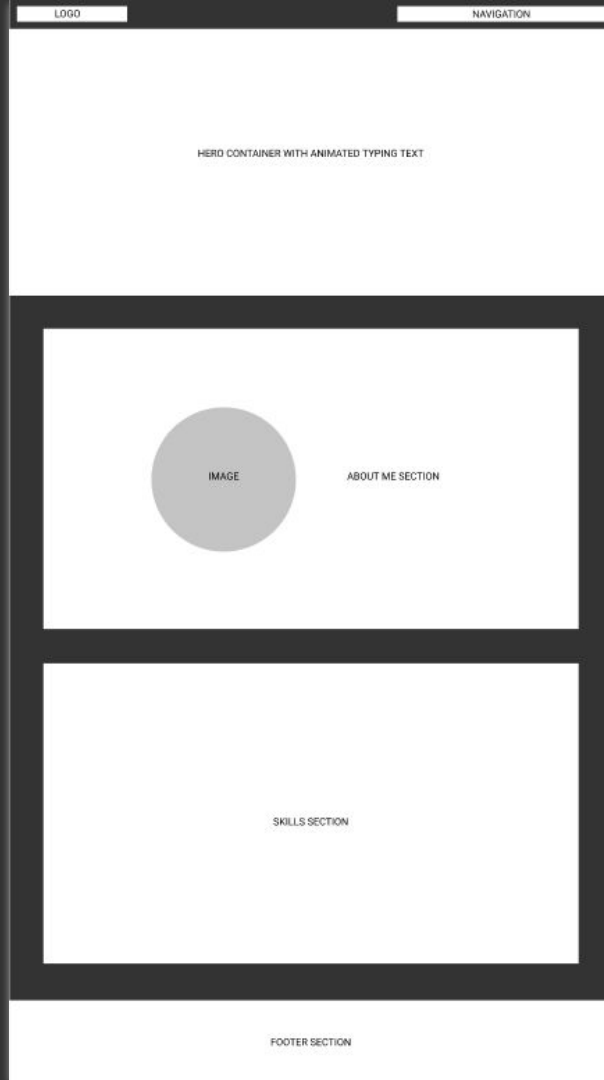

Home Page

During the development of the index.html page there were no ethical issues only design challenges when it came to the contact "page" pop-out. I had an issue deciding if I wanted to do a modal or a page the slides in at the click of a button. I chose to go with the page slide out rather than the modal due to having position issues. My favourite part of this page is the hero section; this is my favourite element of the page because of the colours I have chosen and the parallax effect that I used on the background image.

Blog Page

The blog page did not take long for me to develop because I already had a rough idea of what I wanted to do for it. I decided to go for a 50vh hero instead of a 100vh one due to it not being the main page header that people see. I didn't have any challenges whilst developing this page because I did most of the design on the index page. My favourite part of the page are the cards.

Blog Post Page

The blog post page is a simple 100vh page that states the information for the blogs are coming soon. This is mainly a placeholder page for development after the the assessment. There were no challenges whilst developing the page.

HERO CONTAINER WITH ANIMATED TYPING TEXT

Projects Page

The development of this page was not hard due to the fact that I was able to just copy over the cards from the "blog" page because I liked the layout and the amount of the information I could fit on the cards. There were no challenges whilst developing this page because I used the elements from the "blog" page. My favourite part of this page is how the image gets zoomed in on hover.

Contact Page Slide In

The contact page/form is a slide in element that is hidden until you push a button. This is a feature that I decided on due to having better alignment options. My favourite part of this page is the form and it being all HTML and CSS.
